

I am Deaf and have Spanish speaking family members that I am not able to call and communicate with because I have very limited written English and Spanish skills. My language is Sign Language and English is my second language. My daughter is typing this for me. I would like to be able to call my family through VRS and have my call relayed in Spanish. Right now that service is not available. I am limited to regular relay but I am unable to use a tty due to my written language barrier. Please include spanish to ASL services in Video relay. Our community would be served adequately.
